(54) Title: A METHOD AND MEANS FOR IMAGE PROCESSING

WO 2005/048161 A1

(57) Abstract: A method and means enabling identification in an NMR image, being one of a time-sequence of images recording induced changes in pixel values of successive images of a subject (such as post-contrast dynamic images), the contribution to the image arising from the presence within the image subject of a specified tissue (e.g. fat). This identification is done using a statistical measure derived from the dynamic data (e.g. pixel value changes due to contrast agent uptake) taken from a plurality of the separate images forming the time-sequence.
